HOLTER MONITOR DIARY

EAST COAST VETERINARY CARDIOLOGY

While your pet is wearing the Holter monitor, it's important to follow your normal daily routine. This diary is for you to keep track of activities and any events that may occur during the Holter recording period. If an event occurs (weakness, collapse), be sure to note the time in the diary below and a brief description of what you noted. You may also press the 'Event' button on the Holter unit itself. We will use the diary to correlate any events with changes on the ECG. Please note any medications that were administered and times of administration.

Remember the Holter **cannot** get wet. If it is raining/snowing you may cover the Holter unit with a plastic bag. Also remember, **no swimming!**
